EDUCATION

Master of Arts Economics | Eastern Michigan University
Bachelor of Science Computer Science | Oregon State University
Bachelor of Science in Pharmaceutical Sciences | University of Toledo

TECHNICAL EXPERIENCE

Oregon State University | *Teaching Assistant (Database & Software Verification)* | Remote Mar. 2024 – Jun. 2026

- **Database Code Auditing (CS 340 Intro to Databases):** Graded database schemas and frontend integrations for 30+ students and 15 final group projects per term, debugging broken queries and verifying relational logic.
- **Engineering Technical Tooling:** Built and distributed an advanced project debugging guide to help student teams launch final apps; guide pulled 100+ views per semester and received formal professor endorsement.
- **Logic & Verification Testing (CS 362 Software Engineering 2):** Held dedicated office hours to troubleshoot code and guide students through writing automated test suites and implementing test coverage techniques.
- **Core Data Structures (CS 261 Data Structures):** Guided students through the low-level implementation of arrays, linked lists, hash maps, and trees, focusing on code efficiency and algorithmic fundamentals.

Prota Ventures | *Ruby on Rails Developer & Studios Partner (Contract)* | Remote Mar. 2022 – Apr. 2022

- **Test Suite Scaling:** Expanded core system test coverage using RSpec and Capybara, writing 7 integrated tests and test factories within the first 5 weeks of on-boarding.
- **Backend Refactoring:** Updated data validation logic inside app controllers and models, and patched helper text across front-end .erb partials to clean up edge-case errors.

Independent Consultant | *Android Engineer* | Remote Jan. 2019 - Mar. 2022

- **Asynchronous Audio Pipelines:** Built and deployed a Kotlin-based ringtone app using the ExoPlayer library to stream, download, and sort hundreds of high-volume audio samples.
- **UI Layout & Architecture:** Designed the mobile interface with Material Design, deploying ConstraintLayout for performance and Jetpack Navigation Component for clean user transitions.
- **Project Lifecycle:** Drafted user stories, mapped out development sprints, and managed the entire project board using Jira.

CORE PROJECTS

Relational Adapter / Facade (Core Query Engine) Lead Developer

- Building an independent, local-first software engine designed to run relational SQL queries over non-relational data formats via a facade pattern.

Speed Score (Vertically Integrated Project) | Frontend Infrastructure Engineer

- Engineered the initial UI mockups and implemented a live-updating user feed driven by Server-Sent Events (SSE) inside the React framework.
- Handled rolling date/time calculation constraints and decoupled the data-fetching pipeline so future developers could scale the codebase easily.

Professional Website | Lead Developer

- Developed a professional website using the MERN stack integrated with Next.js, migrated website to Astro.js and React. (<https://www.justinpdickerson.com>)
